Name   :   Hizkia Joy Ivan
Apply for   :   Full Stack Developer Intern

Link for my project in github:
https://github.com/HizkiaJoyIvan/kitameraki_recruitment_HizkiaJoyIvan

a. Deployed app
   Frontend side (part_one and part_two included) : :
   https://kitameraki-taskmanagementapp.vercel.app/
   Backend side (part_one and part_two included):
   `https://kitameraki-recruitment-hizkia-joy-ivan.vercel.app`
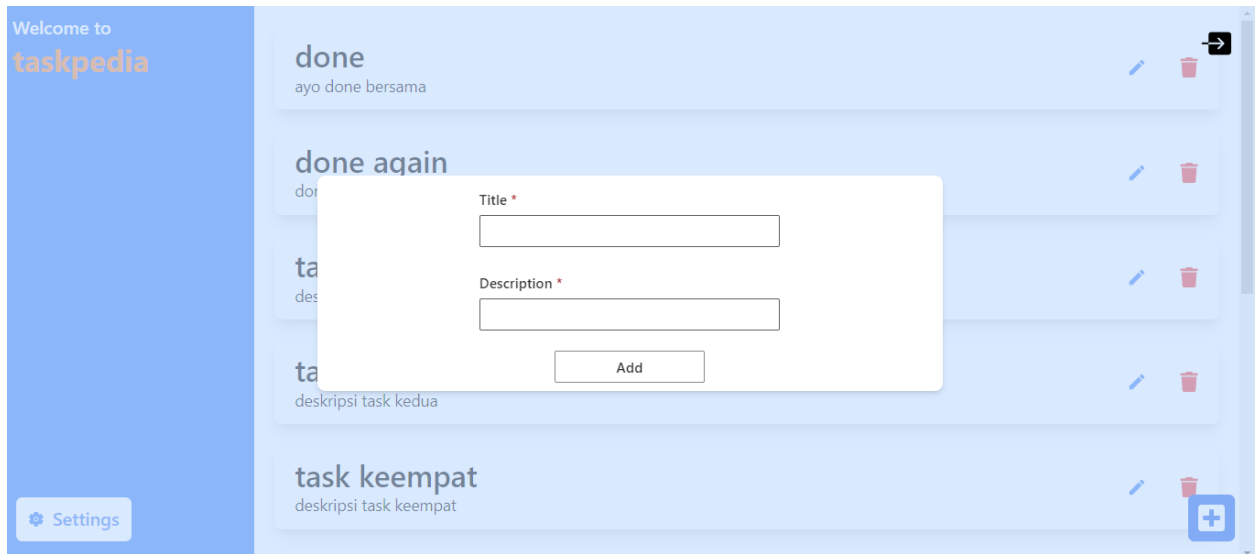

b. Running the app with localhost
   You can run this app by doing this command:
   - git clone https://github.com/HizkiaJoyIvan/kitameraki_recruitment_HizkiaJoyIvan
   - npm i
   - cd backend
   - npm start
   - Add new terminal
   - cd frontend
   - npm start
   This is what the part_one branch of the app look like

   User can create a new task by clicking the plus button in the right-bottom corner
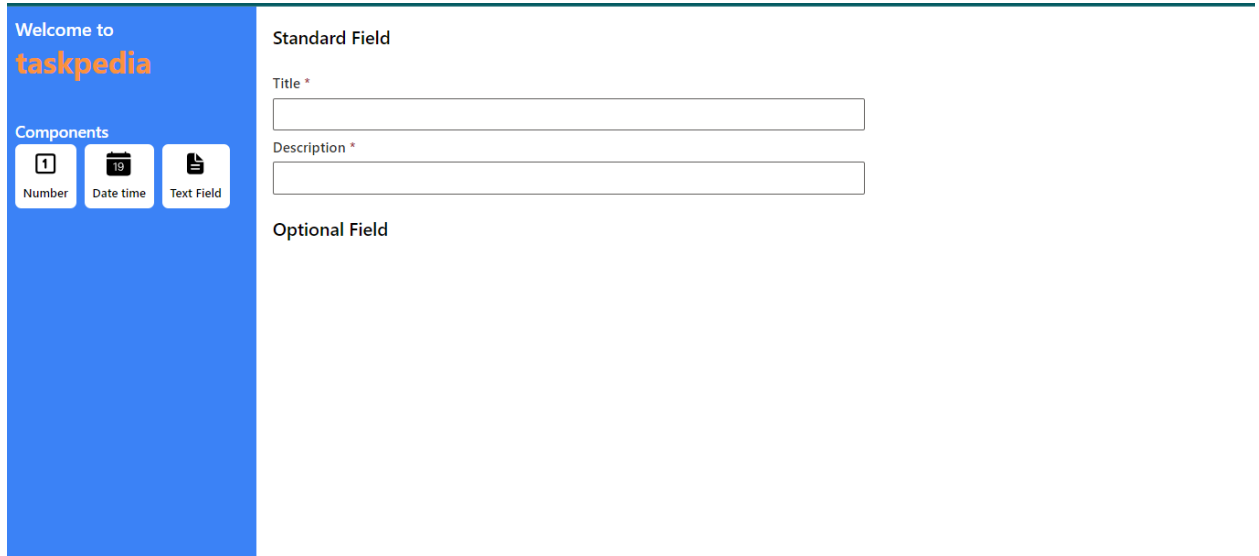

User can also update each task by clicking the pencil button

User can also delete each task by clicking the trash button

This is what the part_two branch look like (you can go to this page by clicking the settings button)

User can basically drag and drop one of the three available components to the right side. So it can make a new addition field to the form

Components

| Number | Date time | Text Field |

Standard Field

Title *

Description *

Optional Field

Number
